Prevent Unauthorized Access Into Business Premises

Large business locations with multiple access points become an easy target for thieves to intrude. IoT-enabled surveillance cameras and sensors backed by artificial intelligence provide enterprises round the clock security by intrusion detection. Unauthorized access into the perimeter and valuable storage can be restricted as an Instant detection of an intrusion and real-time alerts to the command center and escalations help to inform local authorities immediately.

Challenges

Blocked Visibility ∧

Due to the absence of an uninterrupted monitoring solution, industries are unable to access multiple sites imultaneously. An unmonitored site has higher risks of intrusion which can cause huge losses due to theft or pilferage.

Lack Of Notification To Escalation ∨

Unauthorized Access ∨

Unreliablility Of Guards ∨

Solutions

Motion Sensors
IoT-enabled sensors deployed inside cash/gold lockers in banks can sense sensitive motion and create an intrusion alert to inform authorities.

Perimeter Breach Detection
Perimeter intrusion detection systems (PIDS) enable AI powered IP cameras to monitor warehouse perimeter and detect any possible sight of intrusion.

Two-Way Audio
A two-way audio device helps command center professionals to communicate with the intruder to verify his identity

IOT Sensor On ATM
IoT and AI-backed sensors attached to ATMs can detect if a person is trying to break open an ATM or is forcibly removing the machine.

Perimeter Breach Detection
Perimeter intrusion detection systems (PIDS) enable AI powered IP cameras to monitor warehouse perimeter and detect any possible sight of intrusion.

Two-Way Audio
A two-way audio device helps command center professionals to communicate with the intruder to verify his identity

Escalation Matrix
The lack of instance-based notification to concerned authorities can restrict the timely prevention of a threat.

Motion Detection
A suspicious entry into bank lockers can be detected through motion sensors that can identify motion rays and raise an alert in real-time.

What Our Client Say

SBFC

Being in gold loan space, branch safety is a must. IGZY works on a transparent & 100% visibility approach giving us peace of mind and timely delivery with proactive alerts & agile working mechanism. Their unified platform & PAN India presence helped us use our existing resources on a centralised dashboard. Our static hardware is now proactive and actionable thus enhancing our security parameters. We are really impressed and happy to have IGZY as our business partner.

Prasad Noir
The Investment Trust Of India

IGZY, has been a reliable & trustworthy security solution partner in our success journey. Their sensors, cameras and platform provide us with a robust infrastructure for security. Their command center services, allow us to be a little less worried about the security of our premises. The support team is ready with a prompt response.
